CAREER OBJECTIVE

As a Computer Science Engineering student, I am looking forward to opportunities where I can leverage my skills in programming game development and web development. I aim to contribute effectively to the organization while continuing to grow my technical expertise.

EDUCATION

• **Bachelor of Engineering (B.E.)** in Computer Science, Graduated in 2026 - Ballari Institute of Technology and Management

PROJECTS

- **Athlete Sponsorship Management** - Developed using Python for the backend to manage athlete data and sponsorship opportunities.
- **Online Assignment Submission Website** - Developed both frontend and backend using Python, HTML, and SQL database for submission management.
- **Electric Vehicle Charging Station** - A Python-based project focused on optimizing electric vehicle (EV) charging stations, potentially helping users plan or manage charging efficiently.
- **Collaborative Code Editor** – Developed a real-time collaborative code editor using java spring boot and web sockets with live multi-user code editing
- **Roll-a-Ball** – Built a physics-based ball navigation game in unity featuring obstacle handling, collision detection and level interactions using C#.
- **Spirit Fighter** – Developed a 2D fighting game in unity with player movement, combat mechanics and scoring system using C#.

INTERNSHIP EXPERIENCE

- **Intern** at EZ for Python (2024): Assisted in developing Python-based applications and learned key industry practices for web development.
- **Intern at Block se block for AI (2025) :** gains hands-on experience combining artificial intelligence with blockchain-based systems.

SKILLS

- Python , HTML , CSS , JavaScript , SQL , Unity(C#)
